

# The AI Video Agent for Customer Success.

Product deck

# Problem

01 Businesses lose \$3.8T in sales to poor customer experiences, while digital visitors leave without help.

---

03 Visitors abandon slow, repetitive support before they reach a useful answer or a qualified human.

---

05 Financial and public teams need private deployment, retention controls and a clear path to people.

02 Generic chatbots answer FAQs but cannot read the page, product or buying intent shaping each visit.

---

04 Teams connect separate avatar, voice, model and analytics tools, adding weeks of technical setup.

---

06 Conversation counts show activity, but not which agent changed revenue, resolution or conversion.

# Solution

**Ruhana is a complete video agent for websites, built with voice, context, actions and analytics. No developer required.**

---

**1 Answers in real time**

Sales and support by voice or text.

**2 Understands the visit**

Reads the page, product and visitor journey.

**3 Moves work forward**

Qualifies, recommends, books and completes approved actions.

**4 Deploys simply**

One website snippet connects the existing stack.

**5 Hands off cleanly**

Concurrent multilingual sessions retain full context.

# Why Now

- 1 Real-time video models now feel natural enough for live sales and support.
- 2 Voice models deliver low-latency speech across the languages buyers already use.
- 3 Website context supplies the product and journey details generic chatbots miss.
- 4 Buyers increasingly expect immediate conversational help before deciding or leaving.
- 5 Outcome analytics can connect each conversation to revenue, resolution or conversion.

# Market Size

**\$41.4B**

Global conversational AI by 2030

**\$1.04B**

Avatar-led customer service by 2030

# Target Market

**Website-first teams where every missed conversation means lost revenue, unresolved support or a customer leaving without confidence.**

Overage only when used  
No free tier

# Plans & Pricing

## Launch

**\$39**

100 min / month

- 1 agent
- 1 website
- Transcripts
- Outcome analytics

\$0.32 / extra min

## Growth

**\$129**

400 min / month

- 3 agents
- 3 websites
- Integrations
- Journey funnels
- Priority support

\$0.29 / extra min

## Scale

**\$349**

1,200 min / month

- 10 agents
- 10 websites
- Webhooks
- Revenue attribution
- Launch review

\$0.27 / extra min

## Enterprise

**\$999+**

3,500+ min / month

- Custom capacity
- Private deployment
- SSO + SLA
- Success engineering

From \$0.26 / extra min

# Projected Financials

| Metric               | Q1        | Q2        | Q3        | Q4        | Year 1    |
|----------------------|-----------|-----------|-----------|-----------|-----------|
| New customers        | 12        | 23        | 40        | 55        | 130       |
| Total active         | 12        | 35        | 75        | 130       | 130       |
| SUBSCRIPTION REVENUE | \$2.0k    | \$7.0k    | \$18.0k   | \$36.0k   | \$63.0k   |
| Setup and services   | \$1.0k    | \$2.0k    | \$3.0k    | \$4.0k    | \$10.0k   |
| Total revenue        | \$3.0k    | \$9.0k    | \$21.0k   | \$40.0k   | \$73.0k   |
| Variable cost        | \$1.5k    | \$4.0k    | \$9.4k    | \$18.0k   | \$32.9k   |
| Operating spend      | \$18.0k   | \$24.0k   | \$32.0k   | \$45.0k   | \$119.0k  |
| Operating result     | (\$16.5k) | (\$19.0k) | (\$20.4k) | (\$23.0k) | (\$78.9k) |
| Gross margin         | 50%       | 56%       | 55%       | 55%       | 55%       |

Illustrative management base case. Not current results.

# Why Ruhana Will Win

Ruhana adapts across industries while the website keeps each agent specific.

---

## 1 Website-first, not generic

We start from the page, visitor intent and business outcome—not a blank conversation.

## 2 Execution-led go-to-market

We launch with design partners, prove one KPI and expand where the agent works.

## 3 Brand as trust

A premium human interface sits beside clear controls, handoff and measurable accountability.

## 4 Compounding product data

Each deployment improves intents, actions and outcome models that generic avatar APIs do not own.
